**DETAILED ACTION**

***Response to Amendment***

1. In response to the amendment filed 07/14/2004, all necessary changes to the claims have been entered.

***Response to Arguments***

2. Applicant's arguments with respect to the claims 1-5, 7-14, 16-22, 30, and 32-34 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-5 and 7-13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The term "non-radiolucent aligning feature" is not described in the specification.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3737

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by SIEMENS AG (EP 0 945 103 of record). SIEMENS AG teaches in col. 3, line 47 - col. 5, line 35, a multi-element impedance probe apparatus comprising a raster of sensors, substantially radiolucent conductive wiring, a substantially radiolucent substrate, conductive layered structure, and an aligning feature.

7. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Pearlman (US 5,810,742 of record). Pearlman teaches in cols. 6-10, a multi-element impedance probe apparatus comprising a raster of sensors, substantially radiolucent conductive wiring, a substantially radiolucent substrate, conductive layered structure, and an aligning feature wherein the conductive layered structure comprises a material having conductivity substantially similar to the conductivity of the tissue.

8. Claims 14, 16-22, 30, and 32-34 are rejected under 35 U.S.C. 102(a) as being anticipated by SIEMENS ELEMA AB (EP 1 000 580 of record). SIEMENS ELEMA AB teaches in cols. 2-6, an apparatus for tissue examination comprising an impedance imager comprising at least one impedance probe with a first field of view and adapted to produce an impedance image of a body tissue, referenced to a reference indicator, and at least one additional imager of a nuclear imaging modality, having a second field of view, at least partially common to the first field of view, and adapted to produce an image of body tissue, referenced to the reference indicator. The limitations of the dependent claims are inherently taught by the disclosure.
